Eco-Friendly Construction Continues at Angel Village

Insulating Concrete Forms to be Poured Next Week

Who: **HomeAid Colorado**, a non-profit organization that builds quality homes for Colorado's transitionally homeless and **Loveland Berthoud Interfaith Hospitality Network**, a national nonprofit organization that helps families achieve self-sufficiency.

What: The installation of a major Green component of this "Built Green Colorado" building. We will be pouring the insulating concrete forms, which provide superior insulation and reduce energy costs for the buildings that employ them.

This environmentally friendly building will provide transitional housing for temporarily homeless families in Northern Colorado.

When: Tuesday, April 29 and Wednesday, April 30, 2008

Where: 1179 Raven Place, Loveland, Colo.

Why: **Angel Village will be the first home built by HomeAid Colorado using Green building methods.** Showcase popular Green building practices for your viewers and readers, and explain what these important elements can accomplish for homeowners and the environment.

Angel Village, totaling more than 2,000 square feet, will be constructed under "Built Green Colorado" guidelines to minimize the building's environmental impact. Features such as insulating concrete walls, solar-heated water and energy-efficient appliances are just a few of the eco-friendly elements planned in the construction of this duplex.
